DOMESTIC ELECTRICAL INSTALLATION CONDITION REPORT Small installations up to 100 A single phase supply

358044

Issued in accordance with BS 7671: 2018 - Requirements for Electrical Installations

PART 1 : DETAILS OF THE CONTRACTOR, CLIENT AND INSTAL	LATION	
DETAILS OF THE CONTRACTOR	DETAILS OF THE CLIENT	DETAILS OF THE INSTALLATION
Registration No: 60299400 Branch No: N/A	Contractor Reference Number (CRN): N/A	Occupier: Current Occupier
Trading Title: Stanmore Electrical Ltd	Name: Hookglade Property Holding	Address: 433 Kingsland Road, Flat B, London
Address: 26 Jubilee Walk , Kings Langley , Hertfordshire	Address: 107 , Holloway Rd, London	
Postcode: WD4 8FF Tel No: 07525926879	Postcode: <u>N7 8LT</u> Tel No:	Postcode: E8 4AU Tel No:
PART 2 : PURPOSE OF THE REPORT		
Purpose for which this report is required:		(see additional page No. <u>N/A</u>)
Continuation of tenancy, and report of the current condition on keeping the ins	tallation in use	
Date(s) when inspection and testing was carried out: (09/03/2020) Records available: (Yes) Previous in	spection report available: (<u>No</u>) Previous report date: (<u>n/a</u>)
PART 3 : SUMMARY OF THE CONDITION OF THE INSTALLATIO	N	
General condition of the installation (in terms of electrical safety):		(see additional page No. <u>N/A</u>)
Good		
Estimated age of electrical installation: (5) years Evidenc	e of additions or alterations: (<u>No</u>) Overall assessmen	nt of the installation is: Satisfactory
PART 4 : DECLARATION		
INSPECTION AND TESTING		
	al installation, particulars of which are described in PART 7, having exercised ng the observations (page 2) and the attached schedules, provides an accurate a g.	
Name (capitals): MR I LUCIAN FLORIAN	Signature:	Date: 04/05/2020
REVIEWED BY QUALIFIED SUPERVISOR		
Name (capitals): MR I LUCIAN FLORIAN	Signature:	Date: 04/05/2020
*An unsatisfactory assessment indicates that dangerous (CODE C1) and/or potentially dang	erous (CODE C2) conditions have been identified in PART 6, or that Further Investigation (CL	DDE FI) without delay is required.
This report is based on the model forms shown in Appendix 6 of BS 7671 Published by Certsure LLP Certsure LLP operates the NICEIC & ELECSA brands	© Copyright Certsure LLP (July 2018)	Please see the 'Notes for Recipient' Page 1 of 9

DPR18

This report is not valid if the serial	358044
number has been defaced or altered	330044

DOMESTIC ELECTRICAL INSTALLATION CONDITION REPORT Small installations up to 100 A single phase supply

Issued in accordance with B	5 /6/1:2018 - 1	Requirements for	Electrical Installations

I/We (as indicated on page 1) recommend, subject to the necessary remedial work being take Give reason for recommendation: N/A	en, this installation should be further inspec	ed and tested after an inter	val of not more than 5	years*	(see additional page No. <u>N/A</u>)
PART 6 : OBSERVATIONS AND RECOMMENDATIONS FOR ACTIONS TO BE	TAKEN				
CODES: One of the following Codes, as appropriate, has been allocated to each of the observations made below to indicate to the person(s) responsible for the electrical installation the degree of urgency for remedial action	CODE C1 'Danger Present' Risk of injury. Immediate remedial action required	CODE C2 'Potentially Dangerou Urgent remedial action require		mmended'	CODE FI 'Further Investigation Required'
Referring to the Schedule of Items Inspected (see PART 10), the attached Schedule of Circuit There are no items adversely affecting electrical safety , OR The following observation			itations listed in PART 7:		
Item No	Observation(s)			Code	Location Reference
Additional pages? (N/A) State page numbers: (N/A)) Improvement	recommended for items:	(N/A		
Urgent remedial action required for items: (N/A		igation required for items:	·		,

*The proposed date for the next inspection should take into consideration any legislative or licensing requirements and the frequency and quality of maintenance that the installation can reasonably be expected to receive during its intended life. The period should be agreed between relevant parties.

PART 5 : NEXT INSPECTION

This report is not valid if the serial number has been defaced or altered

DPR18

DOMESTIC ELECTRICAL INSTALLATION CONDITION REPORT Small installations up to 100 A single phase supply

358044

Issued in accordance with BS 7671: 2018 - Requirements for Electrical Installations

PART 7 : DETAILS AND LIMITATIONS	OF THE INSPECTION AND	TESTING						
The inspection and testing has been carried ou generally within the fabric of the building or und Details of the installation covered by this repo	lerground, have not been visuall						s, in inaccessible roof spaces	; and
Current electrical installation Agreed limitations including the reasons, if an Insulation resistance not done on all circuits du		ds				Agreed with		onal page No. <u>N/A)</u> onal page No. <u>N/A)</u>
Extent of sampling: (inspection only) 25% Operational limitations including the reasons:	n/a							onal page No. <u>N/A)</u> onal page No. <u>N/A</u>)

Means of Earthing Distributor's facility: (✓) Installation earth electrode: (N/A) Where an earth electrode is used insert Type - rod(s), tape, etc: (N/A) Location: (N/A) Electrode resistance to Earth: (N/A) Ω	Connection / continuity verified Main protective bonding condu	ctors: sa <u>10 mm²</u>)	Main protective bonding connections Water installation pipes: Gas installation pipes: Structural steel: Oil installation pipes: Lightning protection: Other <i>(state)</i> : N/A	S (↓) (↓) () ()	Type: Location: No. of poles: Current rating: Where an RCE RCD rated resi	Switch-fuse / Circuit-breaker / (BS (EN) 60947-3 (El Cupboard (2) : (60)A D is used as the main switch idual operating current, /⊿n: erating time: (N/A) ms	RCD Rating / setting of device: Voltage rating: Rated time delay:) (100) A (<u>230</u>) V (<u>N/A</u>) mA (<u>N/A</u>) ms
*Where the installation is supplied by more than one sc	urce, the higher or highest values of	prospective fault	current, lpf , and external earth fault loop imp	pedance, 2	Ze , must be record	led.		

All fields must be completed. Enter either, as appropriate: ' / if Acceptable condition; 'N/A' if Not applicable;

'LIM' if a Limitation exists; or Code appropriately - CODE 'C1', 'C2', 'C3' or 'FI' (codes to be recorded in PART 6, with additional comments (where appropriate) on attached

DOMESTIC ELECTRICAL INSTALLATION CONDITION REPORT Small installations up to 100 A single phase supply

Issued in accordance with BS 7671: 2018 - Requirements for Electrical Installations

PART 10 : SCHEDULE OF ITEMS INSPECTED

1. External condition of intake equipment (visual inspection only)

Issueu III accorualic	e wilii do 7071:20)10 - Requirenients	s ior Electrical Ilistalla

4.15 Protection against electromagnetic effects where cables

358044

(If inadequacies are identified with the intake equipment, it is recommended the person ordering the report informs the appropriate authority.)		4.1 Adequacy of working space / accessibility to consumer unit / distribution board:	(~)	enter metallic consumer unit / enclosure: 4.16 RCDs provided for fault protection - includes RCBOs:	(~) (~)
1.1 Service cable:		4.2 Security of fixing:	(🗸)	4.17 RCDs provided for additional protection - includes RCBOs:	(~)
1.2 Service head:	(~)	4.3 Condition of enclosure(s) in terms of IP rating:	(🗸)	4.18 Confirmation of indication that SPD is functional:	(N/A)
1.3 Earthing arrangement:	(~)	4.4 Condition of enclosure(s) in terms of fire rating:	(~)	4.19 Adequacy of AFDD(s), where specified:	(N/A)
1.4 Meter tails:		4.5 Enclosure not damaged / deteriorated so as to impair safety:	(~)	4.20 Confirmation that conductor connections, including	
a) Cutout fuse to meter	(~)	4.6 Presence of linked main switch:	(~)	connections to busbars, are correctly located in terminals	
b) Meter to consumer unit	(🗸)	4.7 Operation of main switch(es) (functional check):	(~)	and are tight and secure:	(~)
1.5 Metering equipment:	(🗸)	4.8 Main switch capable of being secured in the OFF position:	(~)	5. Distribution / final circuits	
1.6 Isolator (where present):	(~)	^{4.9} Operation of circuit-breakers and RCDs to prove		5.1 Identification of conductors:	(~)
2. Presence of adequate arrangements for other sources		disconnection (functional check):	(🗸)	5.2 Cables correctly supported throughout:	(~)
		4.10 Correct identification of circuits and protective devices:	(~)	5.3 Condition of insulation of live parts:	(~)
2.1 Adequate arrangements where a generating set operates as a switched alternative to the public supply:	(N/A)	4.11 Presence of appropriate circuit charts, warning and other no	tices:	5.4 Non-sheathed live conductors protected by enclosure in conduit,	
2.2 Adequate arrangements where generating set operates in	(N/A)	 a) Provision of circuit charts/schedules or equivalent forms of information 	(~)	ducting or trunking (including confirmation of the integrity of conduit and trunking systems):	(~)
parallel with the public supply: 2.3 Presence of alternative / additional supply warning notices:	(N/A)	b) Warning notice of method of isolation where live parts	(~)	5.5 Adequacy of cables for current-carrying capacity with regard to the type and nature of installation:	(~)
3. Earthing and bonding arrangements		not capable of being isolated by a single device		5.6 Adequacy of protective devices; type and rated current for	
3.1 Presence and condition of distributors earthing arrangement:	(~)	c) Periodic inspection and testing notice	(~)	fault protection:	(~)
3.2 Presence and condition of earth electrode connection,		d) Presence of RCD six-monthly notice, where required	(~)	5.7 Presence and adequacy of circuit protective conductors:	(~)
where appropriate:	(N/A)	e) Warning notice of non-standard (mixed) colours		5.8 Co-ordination between conductors and overload	
3.3 Confirmation of adequate earthing conductor size:	(~)	of conductors present	(🗸)	protection devices:	(~)
3.4 Accessibility and condition of earthing conductor at Main Earthing Terminal (MET):	(\checkmark)	f) All other required labelling provided	(🗸)	5.9 Wiring system(s) appropriate for the type and nature of the installation and external influences:	(~)
3.5 Confirmation of adequate main protective bonding conductor sizes:	(\checkmark)	4.12 Compatibility of protective device(s), base(s) and other components; correct type and rating (no signs of		^{5.10} Cables adequately protected against mechanical damage	
3.6 Accessibility and condition of main protective bonding	(• /	unacceptable thermal damage, arcing or overheating):	(🗸)	and abrasion:	(~)
conductor connections:	(~)	^{4.13} Single-pole switching or protective devices in the line		5.11 Provision of additional protection by 30 mA RCD (see Note):	
3.7 Accessibility and condition of other protective		conductors only:	(~)	a) For all socket-outlets with a rated current not exceeding 32 A	(~)
 bonding connections: 3.8 Provision of earthing and bonding labels at all 	(~)	4.14 Protection against mechanical damage where cables enter consumer unit / distribution board:	(~)	 b) For mobile equipment not exceeding a rating of 32 A for use outdoors 	(~)
appropriate locations:	(~)			c) For cables concealed in walls / partitions at a depth of less than 50 mm	(~)

4. Consumer unit(s) / Distribution board(s)

All fields must be completed. Enter either, as appropriate: ' 🗸 if Acceptable condition; 'N/A' if Not applicable; 'LIM'

'LIM' if a Limitation exists; or (

PART 10 : SCHEDULE OF ITEMS INSPECTED

DOMESTIC ELECTRICAL INSTALLATION CONDITION REPORT Small installations up to 100 A single phase supply

358044

Issued in accordance with BS 7671: 2018 - Requirements for Electrical Installations

b) Acceptable location (local / remote) (\checkmark) d) For cables concealed in walls / partitions containing metal 8.2 Where used as a protective measure, requirements for (N/A) (\checkmark) parts regardless of depth c) Clearly identified by position and / or durable marking(s) (\checkmark) SELV or PELV are met: e) For all AC final circuits supplying luminaires 8.3 Shaver sockets comply with BS EN 61558-2-5 (formerly BS 3535) (\checkmark) (\checkmark) 6.3 For isolation only: 8.4 Presence of supplementary bonding conductors unless not a) Warning label(s) posted in situations where live parts Note: Older installations designed prior to BS 7671: 2008 may not have been provided (\checkmark) (\checkmark) required by BS 7671: 2018: cannot be isolated by the operation of a single device with RCDs for additional protection. 8.5 Low voltage (e.g. 230 volts) socket-outlets sited at least 7. Current-using equipment(permanently connected) 5.12 Provision of fire barriers, sealing arrangements and protection (\checkmark) 3 m from Zone 1: (\checkmark) 7.1 Condition of equipment in terms of IP rating: (~) against thermal effects: 8.6 Suitability of equipment for external influences for installed 5.13 Band II cables segregated / separated from Band I cables: (\checkmark) 7.2 Equipment does not constitute a fire hazard: (~) (~) location in terms of IP rating: 5.14 Cables segregated / separated from communications cabling: (\checkmark) 7.3 Enclosure not damaged / deteriorated so as to impair safety: (~) 8.7 Suitability of equipment for installation in a particular zone: (\checkmark) 5.15 Cables segregated / separated from non-electrical services: (\checkmark) 7.4 Suitability for the environment and external influences: (~ 9. Other Part 7 special installations or locations 5.16 Termination of cables at enclosures (extent of sampling 7.5 Security of fixing: (~ List of all other special installations or locations, if any, present: indicated in PART 7 of the report): 7.6 Cable entry holes in ceiling above luminaires, sized or sealed N/A a) Connections soundly made and under no undue strain (\checkmark) so as to restrict the spread of fire: N/A b) No basic insulation of a conductor visible outside enclosure (\checkmark) List number and location of luminaires inspected N/A c) Connection of live conductors adequately enclosed (~) Page No. (N/A) on a separate page: N/A 7.7 Recessed luminaires (downlighters): d) Adequately connected at point of entry to enclosure (\checkmark) N/A a) Correct type of lamps fitted (\checkmark) 5.17 Condition of accessories including socket-outlets, switches N/A (\checkmark) and joint boxes is satisfactory: b) Installed to minimise build-up of heat (\checkmark) c) No signs of overheating to surrounding building fabric Indicate if the relevant requirements of Part 7 are satisfied and append results (\checkmark) 6. Isolation and switching of inspection on a separate numbered page. (isolation, switching off for mechanical maintenance and functional switching) d) No signs of overheating to conductors / terminations (~) 6.1 In general: 8. Location(s) containing a bath or shower SCHEDULE OF ITEMS INSPECTED BY a) Presence and condition of appropriate devices (\checkmark) 8.1 Additional protection by RCD not exceeding 30 mA: Name (capitals): MR I LUCIAN FLORIAN b) Correct operation verified (\checkmark) a) For low voltage circuits serving the location $(\checkmark$ 6.2 For isolation and switching for mechanical maintenance only: b) For low voltage circuits passing through Zone 1 and a) Capable of being secured in the OFF position, (\checkmark) Signature: Date: 09/03/2020 Zone 2 not serving the location (\checkmark) where appropriate PART 11 : SCHEDULES AND ADDITIONAL PAGES

DOMESTIC ELECTRICAL INSTALLATION CONDITION REPORT Small installations up to 100 A single phase supply

		•••	- 1
ADDITIONAL NOTES			
N/A			

(see additional page No. <u>N/A</u>)

NOTES FOR RECIPIENT

THIS CONDITION REPORT IS AN IMPORTANT AND VALUABLE DOCUMENT WHICH SHOULD BE RETAINED FOR FUTURE USE

The purpose of a domestic periodic inspection is to determine, so far as is reasonably practicable, whether the electrical installation of a single dwelling (house or flat) is in a satisfactory condition for continued service. This report provides an assessment of the condition of the electrical installation identified overleaf at the time it was inspected and tested, taking into account the stated extent of the installation and the limitations of the inspection and testing.

The report identifies any damage, deterioration, defects and/or conditions found by the inspector which may give rise to danger (see PART 6), together with any items for which improvement is recommended.

If you were the person ordering this report, but not the user of the installation, you should pass this report, or a full copy of it including these notes, the schedules and additional pages (if any), immediately to the user.

This report should be retained in a safe place and shown to any person inspecting or undertaking further work of the electrical installation in the future. If you later vacate the property, this report will provide the new user with a assessment of the condition of the electrical installation at the time the periodic inspection was carried out.

Where the installation incorporates a residual current device (RCD) there should be a notice at or near the device stating that it should be tested every six months. For safety reasons it is important that this instruction is followed.

For safety reasons, the electrical installation should be re-inspected at appropriate intervals by a skilled person of persons, competent in such work. The recommended date by which the next inspection should be carried out is stated in PART 5 of this report. There should also be a notice at or near the main switchboard or consumer uni indicating when the next inspection of the installation is due. NICEIC* recommends that you engage the services of an NICEIC Approved Contractor for the inspection.

This report has been issued in accordance with the national standard for the safety of electrical installations. BS 7671: 2018 - Requirements for Electrical Installations.

Only an NICEIC Approved Contractor or Conforming Body is authorised to issue this NICEIC Domestic Electrical Installation Condition Report, You should have received the report marked 'Original' and the Approved Contractor should have retained the report marked 'Duplicate'.

This report form is intended to be issued only for the purpose of reporting on the condition of an existing electrical installation and must not be issued to certify new electrical installation work including the replacement of a consumer unit.

The report consists of at least six numbered pages. Additional numbered pages may have been provided to permit further relevant information relating to the installation to be recorded. For installations having more than one consumer unit or more circuits than can be recorded in PART 12, one or more additional Schedules of Circuit Details and Test Results should form part of the report. The report is invalid if any of the schedules identified in PART 10 are missing. The report has a printed serial number, which is traceable to the Approved Contractor to which it was supplied by NICEIC.

You should have received the certificate marked 'Original' and the contractor should have retained the certificate * NICEIC is operated by Certsure LLP, a partnership between the Electrical Contractors' Association and the marked 'Duplicate'.

PART 7 (Details and limitations) should identify fully the extent of the installation covered by this report and any limitations on the inspection and testing. The inspector should have agreed these aspects with the person ordering the report before the inspection was carried out.

Rarely, an operational limitation may have been encountered during the inspection such as inability to gain access to parts of the installation or to an item of equipment. The inspector should have noted any such limitations in PART 7. It should be noted that the greater the limitations applying to a report, the less its value from the safety aspect.

A declaration should have been given by the inspector in PART 4 of the report. The declaration must reflect the statement given in PART 3, which summarises the observations and recommendations made in PART 6. Where one or more observations have been made in PART 6, the Classification code given to each by the inspector indicates the degree of urgency with which remedial action needs to be taken to restore the installation to a safe working condition.

Where the inspector has indicated an observation as code C1 (danger present) the safety of those using the installation is at risk. Wherever practicable, items classified as (C1) should be made safe on discovery, and it is recommended that a skilled person(s) competent in electrical installation work undertakes the necessary remedial work immediately.

Where the inspector has indicated an observation as code C2 (potentially dangerous) the safety of those using the installation may be at risk, and it is recommended that a skilled person competent in electrical installation work undertakes the necessary remedial work as a matter of urgency.

Where the inspector has indicated that an item requires further investigation (FI), the investigation should be carried out without delay to determine whether danger or potential danger exists. For further guidance on the Classification codes, please see the reverse of page 2.

Where the installation can be supplied by more than one source, such as the public supply and a standby generator or microgenerator, this should be identified in PART 8 Supply Characteristics and Earthing Arrangements, and the Schedules of Circuit Details and Test Results (PART 12) compiled accordingly.

Where inadequacies in the intake equipment have been observed (Item 1 of PART 10), the person ordering the inspection should inform the distributor and/or supplier as appropriate.

Should the person ordering this report have reason to believe that it does not reasonably reflect the condition of the electrical installation reported on, that person should in the first instance raise the specific concerns in writing with the Approved Contractor. If the concerns remain unresolved, the person ordering this report may make a formal complaint to NICEIC, for which purpose a complaint form is available on request.

The complaints procedure offered by NICEIC is subject to certain terms and conditions, full details of which are available upon application. NICEIC does not investigate complaints relating to the operational performance of electrical installations (such as lighting levels), or to contractual or commercial issues (such as time or cost).

charity, Electrical Safety First. NICEIC maintains and publishes registers of electrical contractors that it has assessed against particular scheme requirements (including the technical standard of electrical work).

GUIDANCE FOR RECIPIENTS ON THE CLASSIFICATION CODES

Only one Classification code should be given for each recorded Observation

Classification code C1 (Danger present)

Where an observation has been given a Classification code C1, the safety of those using the installation is at risk and immediate remedial action is required.

The person ordering the inspection is advised to take action without delay to remedy the observed deficiency in the installation, or to take other appropriate action (such as switching off and isolating the affected part(s) of the installation) to remove the danger. The NICEIC Approved Contractor issuing this report will be able to provide further advice.

NICEIC makes available 'Electrical Danger Notification' forms to enable inspectors to record, and then to communicate to the person ordering the report, any dangerous condition discovered.

Classification code C2 (Potentially dangerous)

Classification code C2 indicates that, whilst those using the installation may not be at immediate risk, urgent remedial action is required to remove potential danger. The NICEIC Approved Contractor issuing this report will be able to provide further advice.

It is important to note that the recommendation given at PART 5 of this report (Next Inspection) for the maximum interval until the next inspection is conditional upon all items which have been given a Classification code C1 and code C2 being remedied immediately and as a matter of urgency, respectively.

It would not be reasonable for the inspector to indicate that the installation is in a satisfactory condition if any observation in this report has been given a code C1 or code C2 classification.

Classification code C3 (Improvement recommended)

Where an observation has been given a Classification code C3, the inspection and/or testing has revealed a non-compliance with the current safety standard which, whilst not presenting immediate or potential danger, would result in a significant safety improvement if remedied. Careful consideration should be given to the safety benefits of improving these aspects of the installation. The NICEIC Approved Contractor issuing this report will be able to provide further advice.

Code FI (Further investigation required without delay)

It should usually be possible for the inspector to attribute a Classification code to each observation without indicating a need for further investigation.

However, where 'FI' has been entered against an observation the inspector considers that further investigation of that observation is likely to reveal danger or potential danger that, due to the agreed extent or limitations of the inspection and/or testing, could not be fully identified at the time.

It would not be appropriate for the inspector to indicate that the installation is in a satisfactory condition if there is reasonable doubt as to whether danger or potential danger exists. Consequently, where the inspector has indicated 'Further investigation required without delay' (FI) the overall assessment of the installation (PART 3) should be marked as 'Unsatisfactory'.

If the inspector has indicated that an observation requires further investigation without delay, the person ordering this report is advised to arrange for the NICEIC Approved Contractor issuing the report (or another skilled person or persons competent in such work) to undertake further examination of that aspect of the installation as a matter of urgency, to determine whether or not danger or potential danger exists.

Further information

Further information on the application of Classification codes, primarily aimed at inspectors but of possible interest to persons ordering condition reports, can be found in Electrical Safety First's Best Practice Guide No 4 Electrical installation condition reporting: Classification Codes for domestic and similar electrical installations. The guide can be viewed or downloaded free of charge from www.electricalsafetyfirst.org.uk
