- Energy rating 2 GRANGE CRESCENT COYCHURCH BRIDGEND CF355HP Valid until Certificate number 28 June 2031 0180-2841-5160-2029-7011 **Property type** Detached house

Total floor area 141 square metres

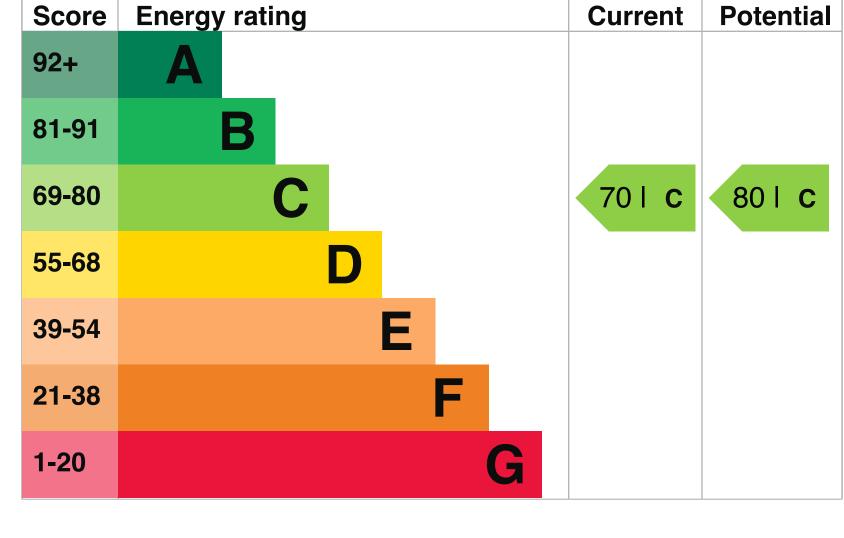

# Properties can be rented if they have an energy rating from A to E.

Rules on letting this property

If the property is rated F or G, it cannot be let, unless an exemption has been registered. You can read guidance for landlords on the regulations and exemptions.

# **Energy efficiency rating for this** property

This property's current energy rating is C. It has the potential to be C. See how to improve this property's energy performance.

Properties are given a rating from A (most efficient) to G (least efficient).

The graph shows this property's current and potential energy efficiency.

Properties are also given a score. The higher the number the lower your fuel bills are likely to be.

For properties in England and Wales: the average energy rating is D • the average energy score is 60

Breakdown of property's energy

This section shows the energy performance for features of this property. The

assessment does not consider the condition of a feature and how well it is working. Each feature is assessed as one of the following:

very good (most efficient)

good average

performance

- poor
- very poor (least efficient) When the description says "assumed", it means that the feature could not be

and type. **Description** Rating **Feature** 

inspected and an assumption has been made based on the property's age

Wall	Cavity wall, filled cavity	Average
Roof	Pitched, 270 mm loft insulation	Good
Roof	Flat, limited insulation	Poor
Window	Fully double glazed	Good
Main heating	Boiler and radiators, mains gas	Good
Main heating control	Programmer, room thermostat and TRVs	Good
Hot water	From main system	Good
Lighting	Low energy lighting in 95% of fixed outlets	Very good
Floor	Solid, no insulation (assumed)	N/A
Floor	To unheated space, no insulation (assumed)	N/A
Secondary heating	None	N/A

# Primary energy use The primary energy use for this property per year is 184 kilowatt hours per

square metre (kWh/m2).

- What is primary energy use?

#### One of the biggest contributors to climate change is carbon dioxide (CO2). The energy used for heating, lighting and power in our homes produces over a quarter of the UK's CO2 emissions.

**Environmental impact of this property** 

6 tonnes of CO2 An average household produces

This property produces 4.6 tonnes of CO2 This property's potential 2.9 tonnes of CO2 production By making the <u>recommended changes</u>, you could reduce this property's CO2 emissions by 1.7 tonnes per year. This will help to protect the environment.

Environmental impact ratings are based on assumptions about average

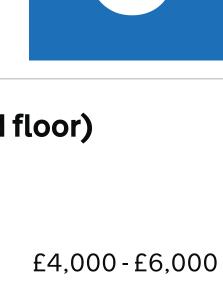

occupancy and energy use. They may not reflect how energy is consumed by

#### performance Making any of the recommended changes will improve Potential energy this property's energy efficiency. rating

How to improve this property's energy

If you make all of the recommended changes, this will improve the property's energy rating and score from C (70) to C (80). What is an energy rating?

Recommendation 1: Floor insulation (solid floor) Floor insulation (solid floor)

£63

72 | C

£3,500 - £5,500

£368

£975

2874 kWh per year

Recommendation 2: Solar water heating

Solar water heating Typical installation cost £4,000 - £6,000 £44 Typical yearly saving Potential rating after carrying out 73 | C recommendations 1 and 2

Recommendation 3: Solar photovoltaic panels, 2.5 kWp

Potential rating after carrying out 80 | C recommendations 1 to 3

# Find energy grants and ways to save energy in your home.

Estimated energy use and potential

#### **Potential saving** £106 The estimated cost shows how much the average household would spend in

The estimated saving is based on making all of the recommendations in how to improve this property's energy performance. For advice on how to reduce your energy bills visit Simple Energy Advice.

this property for heating, lighting and hot water. It is not based on how energy

Estimated energy used to heat this property Space heating 14555 kWh per year

Heating a property usually makes up the majority of energy costs.

Potential energy savings by installing insulation The assessor did not find any opportunities to save energy by installing

with one that generates renewable heat. The estimated energy required for space and water heating will form the basis of the payments.

You might be able to receive Renewable Heat Incentive payments. This will

help to reduce carbon emissions by replacing your existing heating system

# accreditation scheme This EPC was created by a qualified energy assessor.
