### Mine Entry

- ✕ Adit
- ✕ Gutter Pit
- ✕ Shaft

The Coal Authority has records of over 175,000 mine entries within the UK captured in the National Coal Mining database, derived from sources including abandonment plans, geological and topographical plans.

Coal mining activity is recorded as far back as the 13th century, but prior to 1872 there was no requirement to deposit abandonment plans. It is therefore believed there may be many unrecorded mine entries of which the Authority has no information or knowledge. These entries do not, therefore, appear within the Authority's national dataset as shown on this map.

This map displays nearby official conservation areas. Every local authority in England has at least one conservation area. Most are designated by the Council as the local planning authority, though Historic England and the Secretary of State also have the power to create them.

This map displays the noise levels from nearby network rail and HS1 railway routes that affect this property...

### Rail Noise Data

This data indicates the level of noise according to the strategic noise mapping of rail sources within areas with a population of at least 100,000 people (agglomerations) and along Network Rail and HS1 traffic routes.

The data indicates the annual average noise levels for the 16-hour period between 0700 - 2300.

Noise levels are modelled on a 10m grid at a receptor height of 4m above ground, polygons are then produced by merging neighbouring cells within the following noise classes:

### What is Radon?

Radon is a natural radioactive gas, which enters buildings from the ground. Exposure to high concentrations increases the risk of lung cancer. The UK Health Security Agency (UKHSA) recommends that radon levels should be reduced in homes where the annual average is at or above 200 becquerels per cubic metre (200 Bq/m<sup>3</sup>).

# Local Area Road Noise

LAWLER  
& Co.

SALES AND LETTINGS

This data indicates the level of noise according to the strategic noise mapping of road sources within areas with a population of at least 100,000 people (agglomerations) and along major traffic routes. This indicates a 24 hour annual average noise level with separate weightings for the evening and night periods.

Noise levels are modelled on a 10m grid at a receptor height of 4m above ground, polygons are then produced by merging neighbouring cells within the following noise classes:

- 75.0+ dB
- 70.0-74.9 dB
- 65.0-69.9 dB
- 60.0-64.9 dB
- 55.0-59.9 dB

### Testimonial 1

Had a wonderful experience with this Estate agents in buying a property I first saw on day one. We were shown around the property(Aimee) with no pressure and given wonderful advice. Arranged a second viewing(Natalie) with a day/time of our choice. Who said buying a house was stressful? Not with this estate agents. All the way through the purchase they were nothing but helpful.(Natalie) They even suggest a conveyancer who was brilliant also.

### Testimonial 2

Lawler were fantastic and so supportive during what was a very tricky house move. Absolutely would recommend. A special thank you to Sophie who worked so hard and got us there in the end!

### Testimonial 3

Fantastic service. We have sold a property and bought a new one all within 1 week of the house being on the market with Lawler & Co. All members of staff are knowledgeable, professional, friendly & efficient - thank you Gary, Matthew, Natalie & Olivia for all your help. If Carlsberg did Estate Agents...!

### Testimonial 4

It took 18 months in total from marketing to completion to sell my house and Lawler were flawless from start to finish. They never gave up throughout the whole journey and made it their mission to get the house sold and get me to the end. They produce some of the best images as standard. They have great communication and all staff can deal with your queries. And the staff are lovely to deal with they really are.
