Energy performance certificate (EPC)

iles on letting this property

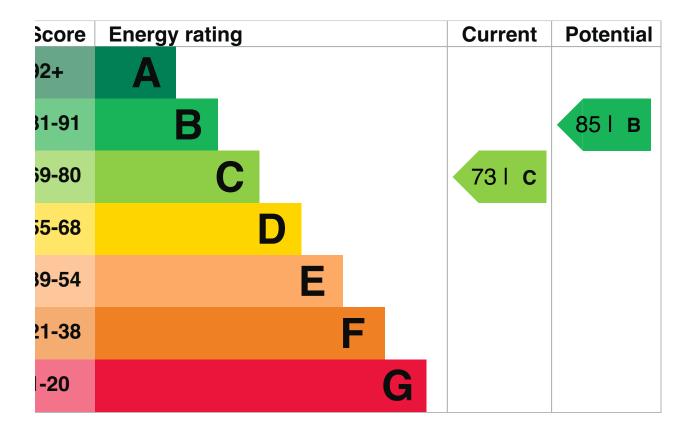

operties can be rented if they have an energy rating from A to E.

he property is rated F or G, it cannot be let, unless an exemption has been registered. You can read <u>guidance for idlords on the regulations and exemptions (https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energiciency-standard-landlord-guidance).</u>

nergy efficiency rating for this property

is property's current energy rating is C. It has the potential to be B.

e how to improve this property's energy performance.

e graph shows this property's current and potential energy efficiency.

operties are given a rating from A (most efficient) to G (least efficient).

operties are also given a score. The higher the number the lower your fuel bills are likely to be.

e average energy rating and score for a property in England and Wales are D (60).

eakdown of property's energy performance

is section shows the energy performance for features of this property. The assessment does not consider the ndition of a feature and how well it is working.

ch feature is assessed as one of the following:

- very good (most efficient)
- good
- average
- poor
- very poor (least efficient)

nen the description says "assumed", it means that the feature could not be inspected and an assumption has been ade based on the property's age and type.

ature	Description	Rating
llE	Solid brick, with internal insulation	Very good
lle	Cavity wall, as built, insulated (assumed)	Good
of	Pitched, 200 mm loft insulation	Good
of	Flat, insulated (assumed)	Average
ndow	Fully double glazed	Good
ain heating	Boiler and radiators, mains gas	Good
ain heating control	Programmer, room thermostat and TRVs	Good
ıt water	From main system	Good
Jhting	Low energy lighting in all fixed outlets	Very good
oor	Suspended, no insulation (assumed)	N/A
or	Solid, no insulation (assumed)	N/A
condary heating	None	N/A

rimary energy use

e primary energy use for this property per year is 186 kilowatt hours per square metre (kWh/m2).

What is primary energy use?

vironmental impact of this property

ne of the biggest contributors to climate change is carbon dioxide (CO2). The energy used for heating, lighting and wer in our homes produces over a quarter of the UK's CO2 emissions.

n average household roduces	6 tonnes of CO2
his property produces	3.0 tonnes of CO2
his property's potential roduction	1.7 tonnes of CO2

making the <u>recommended changes</u>, you could reduce this property's CO2 emissions by 1.3 tonnes per year. This I help to protect the environment.

vironmental impact ratings are based on assumptions about average occupancy and energy use. They may not lect how energy is consumed by the people living at the property.		

ow to improve this property's energy performance

aking any of the recommended changes will improve this property's energy efficiency.

ou make all of the recommended changes, this will improve the property's energy ing and score from C (73) to B (85).

What is an energy rating?

Potential energy rating

lecommendation 1: Floor insulation suspended floor)

or insulation (suspended floor)

pical installation cost	£800 - £1,200
/pical yearly saving	£38
otential rating after carrying out commendation 1	74 I C

lecommendation 2: Solar water heating

lar water heating

pical installation cost	£4,000 - £6,000
pical yearly saving	£27
otential rating after carrying out commendations 1 and 2	75 I C

lecommendation 3: Solar photovoltaic panels, 2.5 kWp

lar photovoltaic panels

pical installation cost	£3,500 - £5,500
pical yearly saving	£327

aying for energy improvements

1d energy grants and ways to save energy in your home. (https://www.gov.uk/improve-energy-efficiency)

stimated energy use and potential savings

stimated yearly energy cost for is property	£682
otential saving	£65

e estimated cost shows how much the average household would spend in this property for heating, lighting and hot iter. It is not based on how energy is used by the people living at the property.

e estimated saving is based on making all of the recommendations in <u>how to improve this property's energy</u> rformance.

r advice on how to reduce your energy bills visit Simple Energy Advice (https://www.simpleenergyadvice.org.uk/).

leating use in this property

eating a property usually makes up the majority of energy costs.

stimated energy used to heat this property

pace heating	9543 kWh per year
ater heating	1779 kWh per year

otential energy savings by installing insulation

e assessor did not find any opportunities to save energy by installing insulation in this property.

u might be able to receive Renewable Heat Incentive payments (https://www.gov.uk/domestic-renewable-heat-incentive is will help to reduce carbon emissions by replacing your existing heating system with one that generates renewable at. The estimated energy required for space and water heating will form the basis of the payments.

ontacting the assessor and accreditation scheme

is EPC was created by a qualified energy assessor.

rou are unhappy about your property's energy assessment or certificate, you can complain to the assessor directly.
rou are still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.
creditation schemes are appointed by the government to ensure that assessors are qualified to carry out EPC sessments.
