bills are likely to be.

The average energy rating and score for a property in England and Wales are D (60).

Breakdown of property's energy performance

This section shows the energy performance for features of this property. The

assessment does not consider the condition of a feature and how well it is

Each feature is assessed as one of the following: very good (most efficient)

good average poor

When the description says "assumed", it means that the feature could not be

Description

inspected and an assumption has been made based on the property's age

very poor (least efficient)

and type.

working.

- **Feature**
- Wall Timber frame, as built, insulated (assumed)

Pitched, 300 mm loft insulation Roof Very good

Window	Fully double glazed	Average
Main heating	Room heaters, electric	Very poor
Main heating control	Appliance thermostats	Good
Hot water	Electric immersion, standard tariff	Very poor
Lighting	Low energy lighting in all fixed outlets	Very good
Floor	Solid, no insulation (assumed)	N/A
Secondary heating	Room heaters, electric	N/A
Primary energy	use	
The primary energy using the square metre (kWh/	rse for this property per year is 358 kilowatt m2).	hours per
► What is primary e	nergy use?	

One of the biggest contributors to climate change is carbon dioxide (CO2).

recommendations 1 to 3

Typical yearly saving

this property

Potential saving

Water heating

is used by the people living at the property.

Heating use in this property

to improve this property's energy performance.

Potential energy savings by installing insulation

recommendations 1 to 4

Potential rating after carrying out

produces

production

The energy used for heating, lighting and power in our homes produces over a quarter of the UK's CO2 emissions.

Environmental impact of this property

This property produces 3.7 tonnes of CO2

emissions by 1.7 tonnes per year. This v	will help to protect the environment.
Environmental impact ratings are base occupancy and energy use. They may rethe people living at the property.	,

How to improve this property's energy

By making the <u>recommended changes</u>, you could reduce this property's CO2

this property's energy efficiency. rating If you make all of the recommended changes, this will improve the property's energy rating and score from E (42) to B (86).

Floor insulation (solid floor) Typical installation cost

Recommendation 1: Floor insulation (solid floor)

Making any of the recommended changes will improve

recommendation 1 Recommendation 2: High heat retention storage heaters

Recommendation 3: Solar water heating

46 | E £1,200 - £1,800

Typical installation cost £4,000 - £6,000 £66 Typical yearly saving Potential rating after carrying out 73 | C

Recommendation 4: Solar photovoltaic panels, 2.5 kWp Solar photovoltaic panels Typical installation cost £3,500 - £5,500

Paying for energy improvements Find energy grants and ways to save energy in your home. Estimated energy use and potential savings £1336 Estimated yearly energy cost for

The estimated cost shows how much the average household would spend in

this property for heating, lighting and hot water. It is not based on how energy

The estimated saving is based on making all of the recommendations in how

Other certificates for this property

If you are aware of previous certificates for this property and they are not

The assessor did not find any opportunities to save energy by installing insulation in this property. You might be able to receive Renewable Heat Incentive payments. This will help to reduce carbon emissions by replacing your existing heating system with one that generates renewable heat. The estimated energy required for space and water heating will form the basis of the payments. Contacting the assessor and accreditation scheme
