Net Zero Carbon

Committing to a sustainable future

We take creating sustainable environments seriously as we know that we can only fulfil our purpose of 'creating thriving cities' if we can deliver sustainable and environmentally-conscious spaces.

We were the first commercial property partner to sign up to the Green Building Council's Net Zero Carbon Commitment pledge, which aims for new buildings to be net zero carbon by 2030 and older buildings the same by 2050.

We are committed to leading the way with sustainability and we have a range of initiatives in place from waste disposal to using smart technology and using renewable energy to promoting sustainable transport, all with the aim of becoming a more sustainable business.

Our commitment to Net Zero Carbon is one of the reasons we're championing sustainable practices, and it's why we've created a specific set of science based targets to monitor our emissions.

The Carbon Trust helped us define these targets through a process that assessed global emissions, the emissions produced by the property sector, and how much of those emissions we are responsible for. Then, they can estimate how big that portion will be by 2050.

By putting our targets in place, we can monitor and improve our output more efficiently.

We've introduced other measures in the fight against global heating, too:

Smart buildings strategy

We're introducing algorithmic learning into our buildings. Sensors will gather data about heating, lighting and motion to help us use energy more efficiently.

Solar panelling

We already have solar panelling on many of our buildings, but we're stepping up our commitment to solar power by installing batteries to store energy for later use.

Waste processes

Our partnership with B&M Waste is the first step in diverting 100% of our waste from landfill.

Water audits

Reducing water usage saves energy, helping to lower carbon emissions. That's why our Utilities team has carried out water audits across the estate. So far, they've been able to save two Olympic sized swimming pools worth of water per month.

Riser adoption

We're transforming the way we use electricity in our buildings, using specialist risers and voltage optimisation. These measures help us regulate, clean, and condition the incoming power supply, leading to lower energy usage.
