

For Sale or to Let

Former Anhydrite Mine, Haverton Hill Road

Billingham, Stockton-on-Tees

- Approximately 11,500,000m³ void space
- 2.42 hectares (5.54 acres) of surface land
- Potential for various storage uses

**AVISON
YOUNG**

Introduction

Anhydrite was mined here from 1921 until 1971 with over 33,000,000 tonnes being extracted principally to make fertilisers and cements. The mine is accessed from two shafts some 250 metres in depth, surrounded by a site of 2.42 hectares (5.54 acres) at ground level.

The mine offers potential for various storage uses including, but not limited to, waste materials such as APCr and other residues in a non-reactive environment.

Location

The mine is located on the north bank of the River Tees and to the south east of Billingham town centre. The shafts providing entry to the mine are accessed from Haverton Hill Road via a right of way.

Billingham has excellent access to the A19, providing access north to Sunderland and Newcastle, and south to York. The A19 also provides access to the A1(M) via the A66, providing access to locations between Edinburgh and London.

Alternative transport north is available by the Durham Coast Rail Line. This line also provides connections to London via the Trans-Pennine rail network at Thornaby,

Teesside International Airport is approximately 12 miles to the west with Newcastle International Airport approximately 42 miles to the north. The town also lies approximately 5 miles from Tees Port and benefits from excellent access to the other North East coastal ports via the A19

Description

The mine extends over a distance of approximately 1.5 kms east to west and 3 kms north to south with a total footprint of around 400 hectares (988.42 acres) and a volume (excluding pillars) of approximately 11,500,000m³. The depth of the mine workings vary from 130 metres in the north, dropping by roughly 80 metres per mile, to 260 metres in the south. The ambient mine temperature is 15°C.

The site at ground level is generally level with a gradual slope from north west to south east. The site comprises an open area and fenced compound containing two covered shafts. The shafts are located 27 metres apart, with a 3.5 metre internal diameter. There are currently no winding gears in place.

There are private sidings situated adjacent to the ground level site. This offers the potential for discussions to be had with the adjacent land owner to negotiate access to these sidings, providing for an alternative route for material import to the property.

Below ground, the mine comprises a series of rooms and pillars with a ratio of room volume to room and pillar volume of approximately 55% and a typical roof height of 5 metres. The shaft top works have been removed and the shafts covered with removable caps.

Condition

The room and pillar construction, together with the natural strength of the rock, has resulted in a stable mine structure on one level.

Planning

Permission was granted on 13th April 2011 for the conversion of the mine to a 4,000,000m³ waste storage facility. The application has since lapsed but allowed for storage of APCr, comprising of a hazardous waste, together with office, laboratory, treatment facility and winding gear for the shafts.

For advice on alternative proposals, purchasers should approach Stockton-on-Tees Borough Council planning department.

Additional information

Agents can provide access to an online data room for further details on the property, including planning history.

Tenure

The site is held freehold under Land Registry Title number CE188479. Freehold is being offered with vacant possession.
