DESIGNED FOR ENERGY EFFICIENCY

From the outset, the architects and developer worked together to ensure the properties at Green View would receive an 'A' rating for energy efficiency.

This goal has been achieved through the installation of the very latest insulation materials, high quality Mitsubishi air source heat pumps feeding underfloor heating to all ground floors, combined with individual thermostats to rooms. As well

as this, there's industry leading double glazing, solar panels, low energy lighting and even electric vehicle car charging points as standard.

The result of this attention to detail ensures living at Green View will mean fuel bills are kept as low as possible and resale values will be stronger than similar properties which can be more expensive to run.

Homes at Green View are efficient and future proofed.
