NOTE

The air filtration heat recovery system provides whole house ventilation to living areas, bedrooms, kitchen and bathrooms. It extracts stale, contaminated air from kitchens, utility rooms and bathrooms, and uses the heat recovered from this air to warm fresh, incoming air to create a flow of fresh, filtered air throughout the dwelling. The extract and intake air streams are separated to avoid contamination. The system will operate continuously to create a stable, comfortable, healthy environment avoiding the use of excessive energy and saving heat already generated.

This air filtration was a pre-requisite for planning purposes at the time and works on the basis that clean air can be filtered in to the property with the windows closed.
