Energy performance certificate (EPC)			
Llys Ifan Llithfaen PWLLHELI LL53 6PA	Energy rating	Valid until: 3 April 2032 Certificate number: 2474-0003-5277-1272-5204	
Property type		end-terrace house	
Total floor area		82 square metres	

Rules on letting this property

You may not be able to let this property

This property has an energy rating of F. It cannot be let, unless an exemption has been registered. You can read guidance for landlords on the regulations and exemptions (https://www.gov.uk/guidance/domestic-private-rented-property-minimum-energy-efficiency-standard-landlord-<u>guidance)</u>.

Properties can be rented if they have an energy rating from A to E. The recommendations section sets out changes you can make to improve the property's rating.

Energy efficiency rating for this property

This property's current energy rating is F. It has the potential to be C.

<u>See how to improve this property's energy</u> performance.

The graph shows this property's current and potential energy efficiency.

Properties are given a rating from A (most efficient) to G (least efficient).

Properties are also given a score. The higher the number the lower your fuel bills are likely to be.

For properties in England and Wales:

the average energy rating is D the average energy score is 60

Breakdown of property's energy performance

This section shows the energy performance for features of this property. The assessment does not consider the condition of a feature and how well it is working.

Each feature is assessed as one of the following:

- very good (most efficient)
- good
- average
- poor
- very poor (least efficient)

When the description says "assumed", it means that the feature could not be inspected and an assumption has been made based on the property's age and type.

Feature	Description	Rating
Wall	Solid brick, as built, no insulation (assumed)	Very poor
Roof	Pitched, 100 mm loft insulation	Average
Roof	Roof room(s), no insulation (assumed)	Very poor
Window	Fully double glazed	Average
Main heating	Boiler and radiators, dual fuel (mineral and wood)	Poor
Main heating control	Room thermostat only	Poor
Hot water	From main system, no cylinder thermostat	Poor
Lighting	Low energy lighting in 30% of fixed outlets	Average
Floor	Suspended, no insulation (assumed)	N/A
Floor	To unheated space, no insulation (assumed)	N/A
Secondary heating	Room heaters, dual fuel (mineral and wood)	N/A

Primary energy use

The primary energy use for this property per year is 517 kilowatt hours per square metre (kWh/m2).

Environmental impact of this property		This property produces	9.1 tonnes of CO2
This property's current environmental impact rating is F. It has the potential to be D.		This property's potential production	3.3 tonnes of CO2
Properties are rated in a scale from A to G based on how much carbon dioxide (CO2) they produce.		By making the <u>recommended changes</u> , you could reduce this property's CO2 emissions by 5.8 tonnes per year. This will help to protect the environment.	
Properties with an A rating produce less CO2		childhinent.	
than G rated properties. An average household produces	6 tonnes of CO2	Environmental impact ratings are based on assumptions about average occupancy and energy use. They may not reflect how energy is consumed by the people living at the property.	

How to improve this property's energy performance

Making any of the recommended changes will improve this property's energy efficiency.

If you make all of the recommended changes, this will improve the property's energy rating and score from F (26) to C (75).

Recommendation	Typical installation cost	Typical yearly saving
1. Room-in-roof insulation	£1,500 - £2,700	£309
2. Internal or external wall insulation	£4,000 - £14,000	£345
3. Floor insulation (suspended floor)	£800 - £1,200	£102
4. Increase hot water cylinder insulation	£15 - £30	£63
5. Low energy lighting	£35	£38
6. Hot water cylinder thermostat	£200 - £400	£31
7. Heating controls (programmer and TRVs)	£350 - £450	£51
8. Solar water heating	£4,000 - £6,000	£127
9. High performance external doors	£1,000	£24
10. Solar photovoltaic panels	£3,500 - £5,500	£380

Paying for energy improvements

Find energy grants and ways to save energy in your home. (https://www.gov.uk/improve-energy-efficiency)

Estimated energy use and potential savings		Heating use in this property Heating a property usually makes up the	
Estimated yearly energy cost for this property	£2070	Estimated energy used to heat this property	
Potential saving	£1090	Space heating	17026 kWh per year
The estimated cost shows how much the average household would spend in this property for heating, lighting and hot water. It is not based on how energy is used by the people living at the property. The estimated saving is based on making all of the recommendations in <u>how to improve this</u>		Water heating Potential energy insulation Type of insulation	3832 kWh per year savings by installing Amount of energy saved
property's energy performance. For advice on how to reduce your en	erav hills	Loft insulation	316 kWh per year

Contacting the assessor and accreditation scheme

This EPC was created by a qualified energy assessor.

If you are unhappy about your property's energy assessment or certificate, you can complain to the assessor directly.

If you are still unhappy after contacting the assessor, you should contact the assessor's accreditation scheme.

Accreditation schemes are appointed by the government to ensure that assessors are qualified to carry out EPC assessments.
