

Energy Performance Certificate

The Village, Sutcombe, HOLSWORTHY, EX22 7PR

Dwelling type: Semi-detached house
Date of assessment: 25 February 2014
Date of certificate: 26 February 2014

Reference number: 8264-7122-2850-5005-4922
Type of assessment: RdSAP, existing dwelling
Total floor area: 168 m²

Use this document to:

- Compare current ratings of properties to see which properties are more energy efficient
- Find out how you can save energy and money by installing improvement measures

Estimated energy costs of dwelling for 3 years:	£ 10,530
Over 3 years you could save	£ 5,883

Estimated energy costs of this home

	Current costs	Potential costs	Potential future savings
Lighting	£ 402 over 3 years	£ 234 over 3 years	
Heating	£ 7,881 over 3 years	£ 3,597 over 3 years	
Hot Water	£ 2,247 over 3 years	£ 816 over 3 years	
Totals	£ 10,530	£ 4,647	 You could save £ 5,883 over 3 years

These figures show how much the average household would spend in this property for heating, lighting and hot water. This excludes energy use for running appliances like TVs, computers and cookers, and any electricity generated by microgeneration.

Energy Efficiency Rating

Top actions you can take to save money and make your home more efficient

Recommended measures	Indicative cost	Typical savings over 3 years	Available with Green Deal
1 Cavity wall insulation	£500 - £1,500	£ 579	
2 Internal or external wall insulation	£4,000 - £14,000	£ 1,656	
3 Floor insulation	£800 - £1,200	£ 483	

See page 3 for a full list of recommendations for this property.

To find out more about the recommended measures and other actions you could take today to save money, visit www.direct.gov.uk/savingenergy or call 0300 123 1234 (standard national rate). The Green Deal may allow you to make your home warmer and cheaper to run at no up-front cost.

Summary of this home's energy performance related features

Element	Description	Energy Efficiency
Walls	Granite or whinstone, as built, no insulation (assumed)	★ ★ ★ ★ ★
	Cavity wall, as built, no insulation (assumed)	★ ★ ★ ★ ★
Roof	Pitched, 150 mm loft insulation	★ ★ ★ ★ ★
Floor	Solid, no insulation (assumed)	—
Windows	Single glazed	★ ★ ★ ★ ★
Main heating	Portable electric heaters assumed for most rooms	★ ★ ★ ★ ★
Main heating controls	No thermostatic control of room temperature	★ ★ ★ ★ ★
Secondary heating	Room heaters, wood logs	—
Hot water	Oil range cooker, no cylinder thermostat	★ ★ ★ ★ ★
Lighting	Low energy lighting in 24% of fixed outlets	★ ★ ★ ★ ★

Current primary energy use per square metre of floor area: 425 kWh/m² per year

The assessment does not take into consideration the physical condition of any element. 'Assumed' means that the insulation could not be inspected and an assumption has been made in the methodology based on age and type of construction.

See addendum on the last page relating to items in the table above.

Low and zero carbon energy sources

Low and zero carbon energy sources are sources of energy that release either very little or no carbon dioxide into the atmosphere when they are used. Installing these sources may help reduce energy bills as well as cutting carbon. The following low or zero carbon energy sources are provided for this home:

- Biomass secondary heating

Opportunity to benefit from a Green Deal on this property

The Green Deal may enable owners and occupiers to make improvements to their property to make it more energy efficient. Under a Green Deal, the cost of the improvements is repaid over time via a credit agreement. Repayments are made through a charge added to the electricity bill for the property. To see which improvements are recommended for this property, please turn to page 3. You can choose which improvements you want to install and ask for a quote from an authorised Green Deal provider. They will organise installation by an authorised Green Deal installer. If you move home, the responsibility for paying the Green Deal charge under the credit agreement passes to the new electricity bill payer.

For householders in receipt of income-related benefits, additional help may be available.

To find out more, visit www.direct.gov.uk/savingenergy or call 0300 123 1234.

Recommendations

The measures below will improve the energy performance of your dwelling. The performance ratings after improvements listed below are cumulative; that is, they assume the improvements have been installed in the order that they appear in the table. Further information about the recommended measures and other simple actions you could take today to save money is available at www.direct.gov.uk/savingenergy. Before installing measures, you should make sure you have secured the appropriate permissions, where necessary. Such permissions might include permission from your landlord (if you are a tenant) or approval under Building Regulations for certain types of work.

Measures with a green tick  are likely to be fully financed through the Green Deal since the cost of the measures should be covered by the energy they save. Additional support may be available for homes where solid wall insulation is recommended. If you want to take up measures with an orange tick , be aware you may need to contribute some payment up-front.

Recommended measures	Indicative cost	Typical savings per year	Rating after improvement	Green Deal finance
Cavity wall insulation	£500 - £1,500	£ 193	 G20	
Internal or external wall insulation	£4,000 - £14,000	£ 552	 F32	
Floor insulation	£800 - £1,200	£ 161	 F37	
Insulate hot water cylinder with 80 mm jacket	£15 - £30	£ 211	 E40	
Draught proofing	£80 - £120	£ 102	 E43	
Low energy lighting for all fixed outlets	£65	£ 33	 E43	
Solar water heating	£4,000 - £6,000	£ 85	 E45	
Replace single glazed windows with low-E double glazing	£3,300 - £6,500	£ 278	 D55	
High performance external doors	£1,500	£ 42	 D56	
Solar photovoltaic panels, 2.5 kWp	£9,000 - £14,000	£ 262	 D62	
Wind turbine	£1,500 - £4,000	£ 86	 D64	

Alternative measures

There are alternative measures below which you could also consider for your home.

- External insulation with cavity wall insulation

Choosing the right package

Visit www.epcadviser.direct.gov.uk, our online tool which uses information from this EPC to show you how to save money on your fuel bills. You can use this tool to personalise your Green Deal package.

Green Deal package	Typical annual savings
Cavity wall insulation	
Internal or external wall insulation	
Floor insulation	
Hot water cylinder insulation	
Draught proofing	
Electricity/gas/other fuel savings	£738 / £0 / £481
Total savings of £1219	
You could finance this package of measures under the Green Deal. It could save you £1219 a year in energy costs, based on typical energy use. Some or all of this saving would be recouped through the charge on your bill.	

About this document

The Energy Performance Certificate for this dwelling was produced following an energy assessment undertaken by a qualified assessor, accredited by Bre. You can get contact details of the accreditation scheme at www.breasessor.co.uk, together with details of their procedures for confirming authenticity of a certificate and for making a complaint. A copy of this EPC has been lodged on a national register. It will be publicly available and some of the underlying data may be shared with others for compliance and marketing of relevant energy efficiency information. The Government may use some of this data for research or statistical purposes. Green Deal financial details that are obtained by the Government for these purposes will not be disclosed to non-authorised recipients. The current property owner and/or tenant may opt out of having their information shared for marketing purposes.

Assessor's accreditation number: BREC201694

Assessor's name: Stephen Lloyd

Phone number: 01237 452 377

E-mail address: convert-epc@hotmail.co.uk

Related party disclosure: No related party

Further information about Energy Performance Certificates can be found under Frequently Asked Questions at www.epcregister.com.

About the impact of buildings on the environment

One of the biggest contributors to global warming is carbon dioxide. The energy we use for heating, lighting and power in homes produces over a quarter of the UK's carbon dioxide emissions.

The average household causes about 6 tonnes of carbon dioxide every year. Based on this assessment, your home currently produces approximately 13 tonnes of carbon dioxide every year. Adopting the recommendations in this report can reduce emissions and protect the environment. If you were to install these recommendations you could reduce this amount by 8.9 tonnes per year. You could reduce emissions even more by switching to renewable energy sources.

The environmental impact rating is a measure of a home's impact on the environment in terms of carbon dioxide (CO₂) emissions. The higher the rating the less impact it has on the environment.

Current rating **27**

G (1-20) **F** (21-38)

E (39-54)

D (55-68)

C (69-80)

B (81-91)

A (92 plus)

Higher CO₂ emissions

Lower CO₂ emissions

Potential rating **68**

Your home's heat demand

For most homes, the vast majority of energy costs derive from heating the home. Where applicable, this table shows the energy that could be saved in this property by insulating the loft and walls, based on typical energy use (shown within brackets as it is a reduction in energy use).

Heat demand	Existing dwelling	Impact of loft insulation	Impact of cavity wall insulation	Impact of solid wall insulation
Space heating (kWh per year)	20,581	(394)	(2,340)	(5,131)
Water heating (kWh per year)	7,549			

Addendum

This dwelling has stone walls and so requires further investigation to establish whether these walls are of cavity construction and to determine which type of cavity wall insulation is best suited.
