Lease terms

New full repairing and insuring leases are available.

EPC

It is anticipated the units will have an EPC rating in band A.

Rent

On application.

VAT

VAT is applicable to the rent at the prevailing rate.

Legal Costs

Each party to the transaction will bear their own legal costs.

Service Charge

An estate charge will be levied in respect of the upkeep and maintenance of common areas.

Business Rates

The properties will be assessed for rating purposes once construction is complete.

ESG - A sustainable development

A responsibility to future generations

Our Ambition.

To build a lasting legacy of strong, sustainable places that will enable future generations to prosper.

Here at Clowes, we are fervent believers that sustainability is more than just a box to be ticked. Whether through property development, land development or contaminated land reclamation, the construction industry has a major responsibility to develop sustainably. In designing and delivering our developments, we do all we can to bring a balanced approach to sustainability. Wherever possible, we make sure we're accountable environmentally, socially and economically. That way, we can play our part in ensuring a better quality of life for everyone – now and for generations to come.

Our building's insulation performs up to **50% better** than Building Regs. require

Environment.

Our commitment to sustainability goes far beyond commercial property development and the design and construction of buildings.

We investigate the site's history and surroundings, explore how we can enhance its natural elements – including the landscaped area around our buildings – and consider the immediate environment wherever possible. Experience and a sharp awareness of our responsibility has shown us many ways and opportunities to contribute to the health of the wider environment, from improving the ecology of the site to creating new amenities for local people.

Efficiency of our buildings.

We carefully consider all measures to mitigate and improve the overall efficiency of our buildings.

- U-values are significantly better than building regulations expect.
- Air leakage statistics are half the value building regulations calls for.
- Internal M&E strategy considers energy efficiency, using effective condensing units to provide heating & cooling facilities.
- LED lighting and PIR sensors improve the overall energy output of the buildings.
- We strive for an EPC rating of 'A' for all our builds.
- Stud Brook Business Park industrial units will achieve BREEAM 'very good'.

These are all considerations made as standard to ensure our buildings have a significantly lower carbon footprint than may otherwise be possible.
