## CLIENTS NOTES ON SOLAR SYSTEM

### 6.5 kW Solar System with 12.5 kWh Battery Storage

This high-efficiency 6.5 kW solar power system is designed to provide reliable, clean energy for residential or small commercial use. It features premium photovoltaic (PV) panels that generate approximately 26–30 kWh of electricity per day, depending on location, weather conditions, and installation factors.

The system is paired with a 12.5 kWh battery storage unit, enabling you to store excess solar energy produced during the day for use at night or during power outages. This significantly increases energy independence and reduces reliance on the grid, especially during peak rate periods.

#### Key Features:

Solar Capacity: 6.5 kilowatts (kW)

Daily Output: ~26–30 kWh/day (varies by location and season)

Battery Storage: 12.5 kilowatt-hours (kWh)

Energy Independence: Store and use your own power 24/7

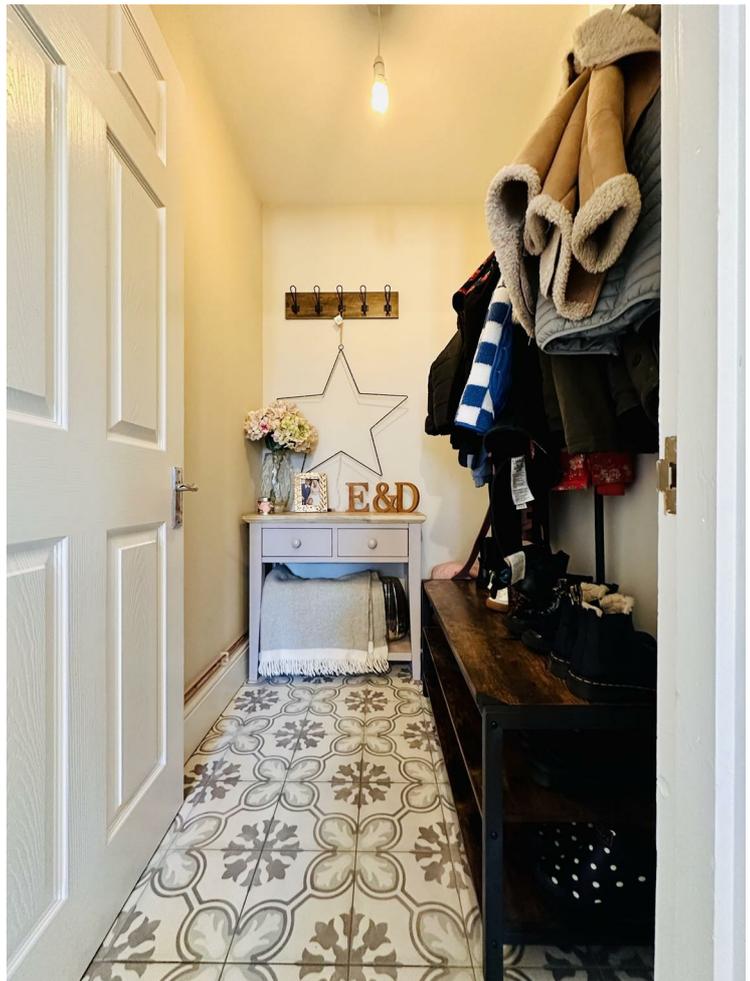

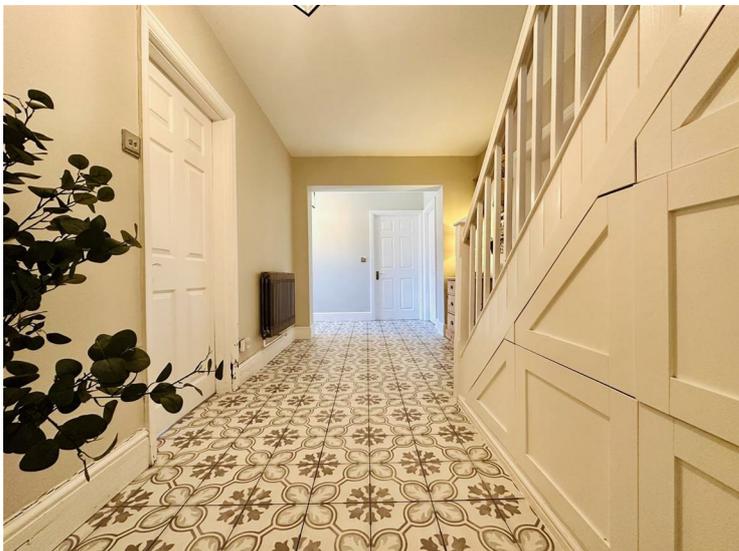

Grid-Tie or Hybrid Ready: Supports both grid-connected and off-grid functionality

Monitoring System: Real-time energy usage and production tracking

Ideal for homes with moderate to high energy needs, this system can help reduce electricity bills, lower your carbon footprint, and provide backup power when needed.

## ENTRANCE HALL

Accessed through a double glazed composite door, a very spacious, light and airy entrance hall with two ceiling lights, radiator, decorative tiled flooring, stairs leading to the first floor landing with useful cupboards underneath, doors to the main living room, sitting room / family room, play room, bedroom five / reception room four, the kitchen / dining and family room and also a door to a large walk in cloaks / boot room.
