VENDOR NOTE

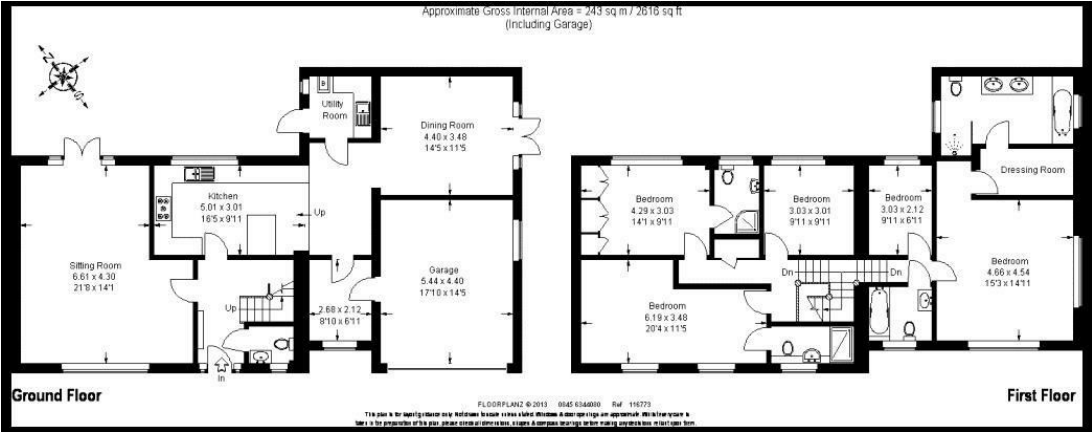

The property has had a 13.5kw Tesla's Powerwall 3 battery installed in 2025. It allows for battery charging overnight on significantly lower energy tariffs. This can be fed back into the house during peak energy costs times. Excess power that has been retained can be sold back into the grid for additional revenue. The setup allows for a solar installation to be installed and connected into the Tesla battery for increased revenue and battery storage. It automatically provides power off the grid in the event of main grid power outages.
