Rail Noise Data

This data indicates the level of noise according to the strategic noise mapping of rail sources within areas with a population of at least 100,000 people (agglomerations) and along Network Rail and HS1 traffic routes.

The data indicates the annual average noise levels for the 16-hour period between 0700 - 2300.

Noise levels are modelled on a 10m grid at a receptor height of 4m above ground, polygons are then produced by merging neighbouring cells within the following noise classes:

5		75.0+ dB	
4		70.0-74.9 dB	
3		65.0-69.9 dB	
2		60.0-64.9 dB

Testimonial 1

We highly recommend Cooper and Tanner Cheddar. We had Mackenzie throughout our purchase, we also met Sally a couple of times. Even though we had to pull out of the first house; Mackenzie helped us with a knew place within the price and area of Cheddar that we were after. Communication was good throughout the process and on completion.

Testimonial 2

Testimonial 4

I bought a flat through Cooper and Tanner in Cheddar, and the whole experience was great. I had an early viewing on a property just about to go onto the market which was perfect for me. Carol handled my questions quickly, and when Carol wasn't in the office Chris picked them up and answered them. Professional, friendly, helpful. Would recommend.
