Biodiversity Net Gain

Overall, across the planned development there is a net loss of 0.14 habitat area units and gain of 0.18 linear units, resulting in a net percentage change of -37.08% for habitat area units and +1492.25% for linear units. Furthermore, the proposed development does not meet the trading rules of BNG. In order to meet the trading rules of BNG and achieve a minimum 10% net gain in biodiversity, a total of 0.17 habitat units are required. A total of 0.14 of those units should be from vegetated garden or a habitat of medium distinctiveness or above.
