AGENTS NOTE

We are obliged to point out the property is in an area classed as liable to "Moderate" to "Low" risk flooding. Our clients family have owned the property for the last 29 years and in that time, we understand there have been 2 instances of surface water flooding (one in December 2023 and one in January 2025) but BOTH of which were caused by the local river overflowed its banks and apparently "there had been no flooding in living memory" before these 2 incidents. Since 2023 the authorities have carried out flood prevention works and there have been no incidents since. Our clients did however install a top quality flood gate and sump as an ADDITIONAL precaution. Their survey showed that if the flood gate and the sump had been in place before 2023, neither flood would have caused any damage.
