Connected by connectivity?

There are three ways we connect you to our broadband network

The diagram illustrates three network connection scenarios. In the top scenario, a house is connected via a fiber line to a cabinet, which then connects to a central office building. In the middle scenario, a house is connected via a fiber line to a cabinet, which then connects to a central office building. In the bottom scenario, a house is connected via a copper line to a central office building.

Fiber to the Premise (FTTP)

Download speeds of up to 1,000 Mbps

FTTP is the fastest way to connect to our broadband. This can mean faster download and upload speeds for your home or business directly from the nearby exchange.

Fiber to the Cabinet (FTTC)

Download speeds of up to 150Mbps

FTTC is the fastest way to connect to our broadband. This can mean faster download and upload speeds for your home or business directly from the nearby exchange.

Copper network (ADSL)

Download speeds of up to 24Mbps

ADSL is the fastest way to connect to our broadband. This can mean faster download and upload speeds for your home or business directly from the nearby exchange.

Change Location

The speeds indicated on the checker are the fastest estimated speeds provided by the network operators (providing services in this area). Actual service availability at a property or speed-restricted may be different. [Click here](#)

The table shows the predicted bandwidth services in your area

Download type	Highest available download speed	Highest available upload speed	Available
Standard	15 Mbps	1 Mbps	
Superfast	67 Mbps	15 Mbps	
Ultrafast	1800 Mbps	220 Mbps	

Networks in your area - [Click here](#)

Networks in your area are listed in order of their download speeds availability, and they are required to provide at least 90% of the predicted

Entrance Hall
